EXPERIENCE

Research Analyst | Highspring LLC

November 2024 – August 2026 | Gurugram, India

Designed and maintained automated reporting solutions using SQL, Looker, Advanced Excel, and Google Sheets to monitor KPIs, operational performance, and quality metrics across multiple business workflows.

Built interactive dashboards and automated reporting pipelines that reduced manual reporting effort by 55%, enabling faster, data-driven decision-making for engineering, operations, and leadership teams.

Designed data extraction and automation solutions using Google Apps Script, JavaScript, and Google Workspace APIs, streamlining data collection from internal systems for reporting and analysis.

Cleaned, transformed, and validated large datasets using SQL, Python, Advanced Excel, and Google Sheets, ensuring high-quality, analysis-ready data for reporting and business insights.

Built ETL-style data preparation workflows that automated repetitive processes, reduced manual effort, and improved reporting efficiency across operational teams.

Developed KPI dashboards and business reports that enabled stakeholders to monitor trends, track performance, and make informed business decisions.

Processed and validated 3,000+ knowledge graph entities per month, performing data validation, anomaly detection, and root cause analysis that reduced information discrepancies by 30%+.

Evaluated 7,000+ AI-generated responses to identify factual inaccuracies, reasoning gaps, hallucinations, and quality trends, delivering actionable insights to improve AI model performance.

Investigated, prioritized, and resolved 100+ high-priority production issues weekly, collaborating with engineering and cross-functional teams to reduce escalation turnaround time by 40%.

Maintained 95%+ quality accuracy as a Reviewer, Senior Reviewer (SR), and Auditor while improving evaluation consistency, operational efficiency, and quality standards across AI workflows.

Designed and developed internal web applications, browser extensions, and workflow automation tools using Google Apps Script, JavaScript, HTML, CSS, and Python, improving reviewer productivity and operational efficiency.

Integrated automation solutions with Google Workspace, spreadsheets, and internal systems to reduce manual effort, improve data accuracy, and streamline repetitive business processes.

Partnered with cross-functional stakeholders to gather reporting requirements, define business metrics, implement feature enhancements, troubleshoot issues, and continuously optimize reporting solutions and internal productivity tools.

SKILLS

- SQL:** SQL Server, BigQuery, Joins, CTEs, Window Functions, Subqueries, Views, CASE Statements, Aggregate Functions, GROUP BY, HAVING, Query Optimization
- Python:** Pandas, NumPy, PySpark, Matplotlib, Seaborn, RESTful APIs
- Visualization & BI:** Power BI, Tableau, Looker Studio, DAX, Power Query, Dashboard
- Advanced Excel:** Pivot Tables, XLOOKUP, INDEX-MATCH, SUMIFS, IF, Charts
- Cloud & APIs:** Google Cloud Platform (BigQuery), Google Workspace APIs, RESTful API Integration
- Statistics & Machine Learning:** Descriptive Statistics, Hypothesis Testing, Correlation Analysis, Regression, Classification, Clustering, A/B Testing, Scikit-learn

PROJECT

Retail Sales Performance Dashboard | Power BI

- Designed and Influenced an interactive Power BI dashboard to analyze sales performance, customer purchasing behavior, product performance, and inventory trends.
- Built scalable data models using Power Query, DAX, and star schema modeling to transform raw data into actionable business insights.
- Created KPI dashboards to monitor revenue, order volume, average order value (AOV), customer trends, and category performance through dynamic visualizations and drill-through analysis.
- Performed data cleaning, transformation, and validation to ensure reporting accuracy, enabling stakeholders to make informed, data-driven business decisions.

Restaurant Sales & Customer Behavior Analysis | SQL Server

- Performed end-to-end data analysis on restaurant sales data using SQL Server to uncover Customer segmentation, purchasing behavior, retention trends, and revenue optimization.
- Wrote complex SQL queries utilizing Joins, CTEs, Window Functions, Aggregate Functions, Subqueries, CASE statements, and Views to clean, transform, and analyze large datasets for business reporting.
- Conducted exploratory data analysis (EDA) and Delivered insights KPI-driven reports to measure revenue, average order value, customer retention, sales growth, and top-performing restaurants, enabling data-driven business recommendations.
- Optimized SQL queries and performed data validation to ensure reporting accuracy while translating analytical findings into actionable insights through clear business reporting.

EDUCATION

Bachelor in Computer Science, 2020 — 2023

Graduated with a degree in Computer Science, achieving a GPA of 8.55.

Secondary School in Computer Science, 2019 — 2020

Completed secondary school with 78.4%, specializing in Computer Science.

Somaiya University, Mumbai

Kendriya Vidyalaya Bhandup, Mumbai
